

LibSwiftRide

INVESTOR PITCH DECK

Liberia's Trusted Digital Transportation Platform

Connecting passengers, drivers, and businesses through safe, reliable, and technology-powered mobility.

Investment & Partnership Team

01 / 20

THE PROBLEM

Liberia's transportation challenges

01

Reliability

Limited access to coordinated, dependable transportation.

02

Trust

Difficulty confirming driver and vehicle information.

03

Visibility

Limited digital tracking, trip status and fare transparency.

04

Safety

Passengers need stronger verification and support tools.

05

Business mobility

Organisations struggle to manage employee transportation.

A market ready for locally relevant digital mobility

Urban growth

More movement between communities, workplaces and commercial areas.

Digital adoption

Technology-based services are becoming more useful in daily life.

Business need

Companies need safer travel controls and clearer expenses.

Employment opportunity

Driver partnerships can create transparent income pathways.

Qualitative opportunity framing. No unverified market-size or adoption figures are presented.

One connected mobility ecosystem

Passengers

- Book rides
- Track trips
- Arrive safely

Drivers

- Register
- Get verified
- Earn income

Businesses

- Manage employee travel
- Control usage
- Review reports

HOW IT WORKS

Clear journeys for every participant

Passenger journey

1. Enter locations
2. Choose ride
3. Track driver
4. Complete and review

Driver journey

1. Register
2. Complete verification
3. Accept trips
4. Earn income

Business journey

1. Create account
2. Add employees
3. Set controls
4. Monitor reports

Four mobility revenue streams

01

Passenger rides

Commission from completed trips.

02

Business mobility

Corporate transportation programmes.

03

Driver & fleet partnerships

Connected network and platform services.

LEADERSHIP

Local leadership. Long-term ambition.

Jerry G. Toe

Founder & CEO

Guides strategy, platform mission and long-term partnerships.

Matthew P. Gaye Jr.

Chief Operating Officer

Leads service operations, safety coordination and scalable execution.

Three years of staged execution

Year 1

Launch

- Launch Monrovia
 - Build customer base
 - Establish operations
-

Year 2

Expand

- Expand service areas
 - Increase partnerships
 - Strengthen operations
-

Year 3

Connect

- National network preparation
- Logistics integration
- Broader business mobility

Model pending verified operating assumptions

Revenue forecasts, operating costs, driver growth, customer growth, funding requirement and break-even timing will be added only after leadership approves the underlying assumptions.

Year 1

Launch expenses, technology, driver acquisition and marketing.

Year 2

Expansion costs, team growth and operating scale.

Year 3

National expansion preparation and service diversification.

Terms require an approved financing strategy

Potential investor returns depend on valuation, funding size, equity terms, dilution, execution, regulatory conditions and realised company performance.

Equity opportunity

To be defined through formal financing discussions.

Revenue growth potential

Linked to completed rides, business mobility and future services.

Long-term company value

Dependent on sustainable operations and responsible scale.

No return, valuation or liquidity outcome is promised.

LibSwiftRide is not only building a transportation platform.

We are building Liberia's digital mobility infrastructure.

A locally grounded opportunity connecting safer journeys, driver income, business mobility and long-term technology infrastructure.
